Description Greenwood grew steadily from the early 18th through the mid 19th century, leaving traces of most of the alterations made. The present house is a primer of styles and building techniques. Greenwood is thought to have been built in 5 sections, beginning with the 1st story of the east end. Next built was the 1-1/2 story gambrel-roofed portion of Flemish bond brick, now at the center of the house. The west wing was begun in 1806, finished in 1853. In 1854 the 1-1/2 story gable-roofed west wing was raised and a tower was added (now gone). The house was stuccoed and scored to look like ashlar and some Victorian trim was added to the eaves. There are several outbuildings (large frame barn, stone cattle shed, smokehouse, wood shed, ice well, carriage house, blacksmith shop) and a Bowie family cemetery. Adjacent to the house is mature landscaping surrounded by a stone wall.

Greenwood is significant for its architectural combinations and also for its age and family associations. On 1720-22 land grants, the house was owned by 5 generations of the Davis family from 1747 to 1906. The original 257 acres grew to 1060 and was one of the largest plantation operations in Montgomery County. Two members of the family are particularly notable, Thomas Davis III and Allen Bowie Davis, his son. Thomas Davis III helped George Washington suppress the Whiskey Insurrection in Pa., and returned to serve several years in the House of Delegates. He became a judge and a surveyor, and was one of the founders of the Brookeville Academy. Allen Bowie Davis was a successful farmer, and wrote a book on farming. He was a community leader, school commissioner, director of the C & O Canal Company, president of the Md.Agricultural Society and Rockville Fair, and a member of the House of Delegates during the Civil War.

The house was built in four sections, the earliest being the lower story of the north end. Subsequently, the 1-1/2 story, gambrel roofed, brick center section was built. Then the south wing (stone) was added in two parts, and the north end raised to its present height. The house was also stucced, with scoring to look like granite blocks.

The center is a 1-1/2 story, brick section laid up in Flemish bond. The west facade had a central door and flanking 9/9 double hung sash; the door has been moved to the north bay and the central bay has been turned into a window. There are two shed-roofed dormers with 6/6 double hung sash windows. On the north end, the house was 1-1/2 stories and has been raised to two, with the gable facing forward. The north bay is a door and the south bay a window; the eaves have bargeboards. The gable windows are "Palladian" with two lower square-headed windows flanking a taller central window. At the south end, the two story wing balances the north wing; the eaves have blocks resembling Tuscanate bracketing continues around the facade. The south wing has 9/6 double hung sash on the east end and 6/6 on the west end. The chimneys are rebuilt in the Victorian manner with double octagonal stacks joined at the top.

The center section was originally two or more likely, three rooms, with a single room across the west front. It had a central doorway with flanking 9/9 double hung sash; the rear facade was nearly identical. Each of the rooms had a corner fireplace. In the front room this is balanced by a corner cupboard with arched baneled and butterfly shelves. The fireplace has a panelled chimned brest and an arched opening that has been "squared off" with a flat arch resting on an iron bar. The ceiling cornice is an ogee moulding with bed moulding set on a plain board fascia with beaded lower edge. The chair rail is a wide board with a heavy center moulding of double ogee profile. The north wall (now in a hall) is panelled with raised panels with H-hinges; one leads to a closet and the other to a passage in the north end.

The north end is divided into two rooms by a later all partition wall. The floor on each side of the wall is a different level. There is a large stone fireplace with a bake oven. In the attic, the ghost of the lower gable of the lower stone wing and the exterior gable windows of the brick section are visible.

At the south end, the two rooms are separated by a central hall. Both rooms have fireplaces on the end walls with marble surrounds. The staircase rises from east to west and has narrow, tapered posts and rectangular ballusters. The east end of the wing is older and was originally an end hall and parlora The windows in this end are 9/6 double hung eash. The west end has 6/6 double hung eash. The roof of the brick section is framed with principal rafrers, mortised, tenoned, and pegged. The collars are half-dovetailed, half-lapped and nailed over the rafters; the nail heads are wrought. The other wings have simpler, late 19th

century roof framing.
